

## **Restaurant Data Analysis Project**

This project contains analysis of restaurant dataset using Python, Power BI, and visualization tools.

### **Project Files:**

- Dataset.csv: Raw dataset used for analysis.
- Intern\_restaurant\_analysis.ipynb: Jupyter Notebook with data cleaning and analysis.
- intern\_Dashboard.pbix: Power BI dashboard file.
- intern\_analysis\_report.pdf: Final report.
- presentation.pptx/mp4: Project presentation.
- screenshots/: Visual outputs and dashboards.

### **Key Features:**

- Data Cleaning and Preprocessing
- Exploratory Data Analysis (EDA)
- Price and Rating Analysis
- Location-based Insights (Latitude & Longitude)
- Online Delivery Analysis
- Interactive Dashboard (Power BI)

### **Tools Used:**

- Python (Pandas, Matplotlib, Seaborn)
- Power BI
- Jupyter Notebook

### **Conclusion:**

This project helps in understanding restaurant trends, pricing strategies, and customer preferences using data-driven insights.
